VENTURE PITCH COMPETITION

PhD Keys

A Phresh Phactory, Inc. Production

The Deep-Tech IP Arbitrage Machine: building a decentralized holding company for the world's most valuable stagnant science.

PRESENTED BY · KIERA H.

Veteran · Multi-Patented Scientist · 20-Year Scaling Operator

The \$100B Graveyard of Stalled Science

The Maintenance Trap

Universities and independent scientists routinely let high-value patents expire at 3.5, 7.5, or 11.5 years simply because they lack the \$2,000–\$7,400 required for USPTO maintenance fees.

MARKET CRASH NODE

The Execution Gap

Brilliant inventors are trained to run laboratories, not navigate regulatory trials, draft venture term sheets, set up corporate governance, or build commercial scaling architectures.

HUMAN CAPACITY CONSTRAINT

The Stagnant Vault

Billions of dollars in public-funded, peer-validated research lie completely stagnant inside unindexed federal databases because traditional tech-transfer offices are bottlenecked.

UNREALIZED IP ARBITRAGE

The Shutdown Pipeline

Government laboratory closures and federal research program suspensions have left entire portfolios of taxpayer-funded science abandoned mid-stream. Active, peer-reviewed discoveries with no institutional home, no maintenance budget, and no commercial pathway — frozen in federal archives, ready for rescue.

ABANDONED PUBLIC SCIENCE

The \$64 Paywall & Scientific Micro-Publishing

The Institutional Gatekeepers

To read a single paywalled paper on advanced materials, AI architectures, or clean-energy pathways costs the average citizen \$64. Public-funded science is hidden behind cash barriers while the public gets scammed by fake internet gurus.

BARRIER LAYER

The Micro-Publishing Engine

PhD Keys breaks the lock. We use advanced LLM translations to ingest these paywalled papers, distill their core discoveries, and package highly digestible, plain-English micro-e-books priced at \$4.99–\$9.99. A high-velocity, high-margin, viral digital revenue pipeline.

LIQUIDITY LAYER

The Media Flywheel Moat

Our proprietary media engine (PhD Keys, a Phresh Phactory, Inc. Production) unlocks paywalled research, distills it through LLM translation, and generates immediate cash liquidity through micro-publications, AdSense, and premium brand partnerships.

STACKED REVENUE STREAMS

Our Investment Thesis: Team Over Solo Inventor

Clayton & Feldman Integration

Empirical analysis in "Academic Teams and Commercialization in the Life Sciences" (Paige Clayton & Maryann Feldman) confirms that commercialization success is heavily dependent on diverse team composition, never the solitary technical inventor.

- PhD Keys operationalizes this science. We leave the scientist completely in control of the laboratory, while our team serves as their outsourced business development force.
- Friction slashed. By executing LLC setup, cap table modeling, VC readiness, and regulatory compliance pathways, we materially compress translation timelines from years to quarters.

OUR ARBITRAGE MOAT · 20–40%

Founder equity positions secured in every NewCo we scale out, captured entirely in exchange for our AI-empowered operational infrastructure.

The Automated IP Sourcing Operating System

01 / Source — LLM Ingestion

Custom LLM web-crawlers scan public federal databases to locate high-value patents approaching critical lapse parameters.

AUTOMATED SCRAPING

02 / Translate — Technical Parse

AI engines instantly translate dense scientific and engineering jargon into investor decks and plain-English content.

RAPID TRANSLATION

03 / Co-Found — Ops Integration

Our operational machine deploys LLC formations, cap tables, legal guidelines, and direct corporate templates.

SWEAT-EQUITY FUNDED

04 / Scale — Venture Launch

Deploy clear regulatory and go-to-market maps, prepare institutional VC pitches, and drive viral market distribution.

COMMERCIAL RUNWAY

Case Study: Proving the Infrastructure

The STAR Delivery Blueprint

Situation: Decades of high-value scientific discoveries remain locked in unindexed registries because academic inventors lack business capacity.

Task: Build a systemic, highly scalable operational infrastructure that frees the technical creator from administrative burdens.

Action: Developed automated patent-mining AI flows and translated academic research into commercial collateral.

Result: Bypassed sluggish university TTOs and mapped 40 custom operational case studies for immediate venture capital funding.

CURRENT SOURCING PIPE · 40 OPERATIONAL CASE STUDIES MAPPED

Validated data pipelines currently mapped and formatted to bypass institutional gatekeepers and rescue stagnant patents.

Funding the Lab Through the Founder

Every PhD we co-found is also a personal brand asset. We package and monetize that authority into recurring revenue streams that fund research runway long before exit — the same productization model proven under the plan, now templated across the portfolio.

Board & Advisory Placements

We pitch each scientist into paid corporate, nonprofit, and startup board seats aligned to their domain — converting credentials into governance income.

\$25K–\$75K PER SEAT / YEAR

Direct-Access Subscriptions

Productized monthly memberships where the public, operators, and other researchers interact directly with the scientist via Q&A, office hours, and gated briefings.

RECURRING MRR

Speaking & Keynotes

Booked stages at industry conferences, university circuits, and corporate offsites. We handle inbound, contracts, and pricing leverage.

\$5K–\$50K PER ENGAGEMENT

Podcast & Interview Circuit

Coordinated guest tours on top-tier science, business, and culture podcasts — compounding distribution into the e-book and subscription funnel.

OWNED MEDIA FLYWHEEL

Sponsored Research Briefs

Branded explainers and white papers where vetted sponsors fund the scientist to publish credible, plain-English distillations of their field.

BRAND-FUNDED AUTHORITY

Licensing & Expert Witness

Inbound legal, due-diligence, and consulting engagements routed through Phresh Phactory, Inc., billed at expert-tier rates with revenue share.

PREMIUM HOURLY YIELD

NET EFFECT

Every founder in the portfolio generates self-funded operating cash from day one. Equity upside is preserved, dilution is delayed, and the lab keeps running while the NewCo matures toward institutional capital.

The Deep-Tech Portfolio Flywheel

Micro-Publishing Cash

Immediate, high-volume digital e-book transactions (\$4.99–\$9.99) generating day-one business liquidity and proving consumer interest.

HIGH-MARGIN CASH LIQUIDITY

B2B Sourcing Fees

Deep-tech VC funds pay us flat finder fees of \$10,000 per pre-vetted hard-science asset successfully sourced for them. We retain 20–40% co-founder equity in every NewCo we place, so we earn the fee upfront and the equity upside on exit.

\$10K FEE + EQUITY STACK

Equity Arbitrage Stakes

Assuming complete corporate execution burden for selected researchers in exchange for 20%–40% co-founder equity positions. Stacks concurrently with B2B sourcing fees on the same deals.

PORTFOLIO EQUITY VALUE

Path to Scale: 16-Week Blueprint

W 1–4 · Set Infrastructure

Establish regulatory filters and finalize LLM database sourcing rules with Watson Institute advisory.

FOUNDATIONS

W 5–7 · Index & Vet

Run first sourcing sweeps, score lapsing patents by commercial viability, and shortlist target inventors.

PIPELINE BUILD

W 8–12 · Deploy Sourcing

Allocate pilot compute budget to unlock high-capacity GPU processing for patent indexing at production scale.

PRODUCTION SCALE

W 13–15 · Founder Onboarding

Stand up NewCo entities, cap tables, and monetization stack (boards, subscriptions, speaking) for the first cohort.

FOUNDER COHORT

W 16+ · Onboard Pilot

Close commercial agreement with partnered PhD. Prepare first investor pitch and media episode launch.

COMMERCIAL LAUNCH

GOOGLE CLOUD POWER · DEEP INTEGRATION CHANNEL

Running large-scale LLM databases and vector parsing engines relies fully on the infrastructure strength of Google Data Centers.

The Competitive Landscape

Patent brokers, tech transfer offices, IP law firms, and patent trolls each touch one slice of this market. None combine LLM-driven sourcing, micro-publishing cash, founder monetization, and VC-paid sourcing fees into a single operational machine. PhD Keys is the integration layer.

Player	Sources IP	Cash Pre-Exit	Co-Founds NewCos	Monetizes Scientist
University TTOs	Yes (internal)	No	Rarely	No
Patent Brokers	Yes	Brokerage fee only	No	No
IP Law Firms	No (defensive)	Hourly billings	No	No
Patent Trolls	Yes	Litigation only	No	No
PhD Keys	Yes (LLM-automated)	Micro-pub + B2B fees	Yes (20–40%)	Yes (full stack)

A Show for Every PhD

Each scientist we co-found becomes the anchor of an owned media property — a podcast, video series, or limited-run documentary published under the Phresh Phactory, Inc. umbrella. Shows cross-promote, guest on each other, and compound distribution across the entire portfolio. The lab becomes the studio.

Owned Distribution

Every NewCo ships with a branded show: long-form interviews, lab walk-throughs, and field dispatches. Audience captured to our list, not a platform's algorithm.

NETWORK EFFECT

Cross-PhD Collaborations

Materials scientists guesting on clean-energy shows, AI architects interviewing biotech founders. Crossover episodes compound reach and surface multidisciplinary deals.

PORTFOLIO FLYWHEEL

Funnel Into Commerce

Every episode routes back to the \$4.99–\$9.99 micro-publishing catalog, paid subscriptions, board placements, and investor inbound for the underlying NewCo.

MEDIA → REVENUE LOOP

THE LONG GAME

A 25-PhD portfolio becomes a 25-show media empire. Phresh Phactory, Inc. owns the rails, syndication rights, and ad inventory — a defensible content moat no patent broker or TTO can replicate.

De-Risked by Design

Current Traction

- ✓ 40 operational case studies mapped and scored for commercial viability.
- ✓ Proprietary LLM sourcing pipeline built and running against federal databases.
- ✓ Founder monetization stack already productized under Phresh Phactory, Inc.
- ✓ Veteran-led operator with multi-patent technical credibility and 20-year scaling history.

Risk Mitigation

IP & Copyright: LLM ingestion limited to lawfully licensed sources and public federal databases; outputs are original distillations, not reproductions.

Inventor Consent: Every NewCo executed under signed co-founder agreement before any commercial action.

Portfolio Diversification: 25+ NewCos hedge deep-tech 7–10 year hold cycles; B2B fees and micro-publishing fund operations in the interim.

Legal Backbone: Corporate, IP, and regulatory counsel integrated into the workflow before founder onboarding.

Capital, Instrument, and Milestones

Raise — \$1.5M Seed round on SAFE at \$8M post-money cap. ROUND SIZE	Instrument — SAFE + Revenue Share Optional 5% revenue share on micro-publishing until cap reached. STRUCTURE	Runway — 18 months To 10 NewCos, 3 VC contracts, and first media network launches. HORIZON
--	--	--

Use of Funds

LLM compute & engineering	35%
Legal, IP & NewCo formation	25%
Media network production	20%
Operator hires (BD, ops)	15%
Reserve	5%

12-Month Milestones

- 10 NewCos co-founded with signed equity agreements (20–40%).
- 3 paid B2B sourcing contracts with deep-tech VC funds (\$30K+).
- \$250K micro-publishing run-rate across the catalog.
- 5 Phresh Phactory, Inc. shows in production with first crossover episode.

Let the Smartest People Win

PhD Keys is the definitive operational vehicle engineered to dismantle the academic transfer block, capture multi-million dollar stagnant assets, and return peak scientific truth to the public sphere.

We are currently seeking strategic partners, advisors, and cloud integrations.
